

The Belgian Cadastral Map of Parcels

The Cadmap Project :

- The polyesters films were still updated manually each year
- this map is scanned and is available on CD-Rom
- some areas have been resurveyed

The polyester film were vectorised in 2000 and 2001; they are currently corrected, completed and updated so that in the near future, the territory of Belgium will be completely covered by a digital plan.

In 2004, CADMAP will be the application that will manage the cadastral digital plan. FPS Finances customizes the software "ArcView " to allow recapture, management and updating of the cadastral plan with Belgian geographic coordinates Lambert 72 – IGN.

Main objects on the cadastral plan :

- Cadastral parcels boundaries and the parcel number;
- Buildings
- Administrative boundaries (cadastral section, municipality, cadastral division, province, ...)
-
- Parcel monuments, municipality monuments, miscellaneous monuments.
- Additional informations (streets, rivers, bridges,...)

The "CADGIS PROJECT"

The "CADGIS PROJECT" will bring into play during the results of the "CADMAP PROJECT" and it will be the evolution, of the CAD format to a database where the geographical informations will be tied in alphanumeric informations.

The updating of the database will be interactive and the different files will be managed in a single operation. It will be the platform of "the Junction Data Bank" (Banque Carrefour) of the Patrimonial Documentation.

The "PATRIS PROJECT"

The "PATRIS PROJECT" that will start soon will collect all the "Patrimonial" data in a "Junction Data Bank" – Banque Carrefour of the Patrimonial Documentation.
