Totally 3D (T3D)
On our way to a 3D Digital municipality

The bigger (national) picture: big developments in the geo-information domain:

- Further development of national master key geo-datasets: towards a, coherent 3D geo-data foundation (instead of the current set of loosely coupled 2D geo-datasets)
- Current nationwide 3D datasets for the Netherlands as post processed data available: 3D BAG (buildings and addresses) en 3D Basisvoorziening (buildings en terrain)
- National programme for digital cooperation in the building proces (DigiGO) -> BIM- Geo integration
- European and National data strategy and the principles of federative datasharing

Totally 3D (T3D)

On our way to a 3D Digital municipality

Why T3D?: 3D Dataflow (nowadays in the netherlands)

Building en spatial planningprocess
output = 3D data

(national and local) key geo-datasets
input = 2D data

Usecases
need for 3D information

Either loss of information or duplication of work

On our way to a 3D Digital municipality

Approach: 3 project phases (2020 – 2023)

Explore – Experiment – Implementation (testing setup)

Focus on 3D datamanagement, “powered” by 3 usecases:

1. Smart gathering of individual 3D building data (both outside and inside) for use by enforcement, taxes en safety (using BIM and Lidar and 2D floorplans)
2. Using a 3D citymodel for 3D Permitcheck en 3D feedback
3. Using 3D data about public space and sewerage for flood analysis in a 3D Citymodel

International standards: CityGML, CityJson, IFC, 3D Tiles, LAZ

Totally 3D (T3D)
On our way to a 3D Digital municipality

Overview pilots and experiments:

The Hague:

- Various techniques for collecting and automatically generating 3D data as part of daily operations (IFC, mobile Lidar)
- Basic implementation of the orchestration of data and data “pipelines”

Amsterdam:

- Prototype “do it your self” 3D permit check en 3D feedback
- Input 3D datamodel is used for updating the 3D registration

Rotterdam:

- Tools for submitting changes (triggers) in a 3D datamodel and tools for updating a 3D registration
- Concept of a datafoundation and management of data-quality: 3D Datamodel in relation to other geo-datasets

Updating a 3D Basemap (3D BGT):

Day to day process (new)

Starting with the current process (“2D – triggers”) and using the existing datamodel (IMBGT/IMGEO)

Adding up-to-date 3D data in the daily operations:

- (mobile obtained) Pointclouds (both street and arial)
- BIM (IFC)
- Survey data (x,y,z)

Updating a 3D buildingmodel

Starting with the current process ("2D -triggers") and using an existing datamodel (IMBAG)

Adding up-to-date 3D data in the day to day operations:

- (mobile obtained) Pointclouds (both street and arial and exterior and interior)
- BIM / IFC (planned and as built)
- Aerial and 360' data
- 2D floorplans (if available)

Organized by

Gold sponsor:

What did we deliver and learn?

- Usefull insights in (the complexity and opportunities of) a process for updating 3D data in practise.
- Relevant input on new data gathering techniques which helps to innovate and improve the management of local (3D-) geo-datasets
- A first approach for creating a national standard data model for registration and unlocking of local 3D data (which contributes to a more accurate and up-to-date 3D Basemodel of the Netherlands)
- Over 30 “products” in a toolkit waiting for further development and implementation by other municipalities
