Context (CA) UN-HABITAT land mandate (CA) The Global Land Tool Network (GLTN) (CA) What is core cadastral domain model? (CL) UN-HABITAT raises questions on model (CA) FIG responds (CL) Way forward (CL) Christa Augustions, UN-HABITAT and Christiana Lemmes and Peter van Oosteron, The Netherlands Christa Augustions, UN-HABITAT and Christiana Lemmes and Peter van Oosteron, The Netherlands Christa Augustions, UN-HABITAT and Christiana Lemmes and Peter van Oosteron, The Netherlands

Tenure security coverage

- Best estimates S.America +/- 30%
- Best estimates N. Africa +/- 15%
- 70% of cities in Africa: slums
- Challenge of security of tenure for majority
- New ways of doing business

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom. The Netherla

Customary, informal and post conflict tenure

- Overlapping rights and claims
- Family and group rights
- Social land tenures/livelihoods

FIG Regional Conference, Accra, Ghana, March 10ºº 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

UN-HABITAT land mandate

- 1976 Vancouver action plan
- 1996 HABITAT Agenda
- 1999 Global Campaign for Secure Tenure
- 2000 MDGs (goal 7, target 11)
- 2004 GA resolution on land administration

FIG Regional Conference, Accra, Ghana, March 10ºº 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Global Land Tool Network (GLTN)

GLTN key priorities:

- Develop innovative, pro poor and gendered land tools
- Unblock and upscale existing initiatives
- Strengthening existing networks
- Global coordination and integration
- Dissemination of knowledge

What would GLTN do?

- Develop innovative land tools
- Research, documentation, dissemination
- Strengthen global comprehensiveness (Paris decl.)
- Improve security of tenure of poor
- MDG goals indicators/benchmarks

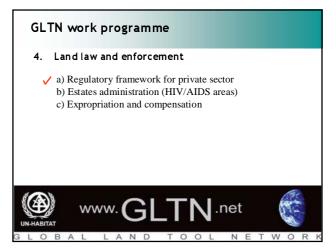

Potential GLTN partners Member states (where tools are developed) UN bodies Research institutions Donors NGOs Professional bodies WWW. GLTN.net

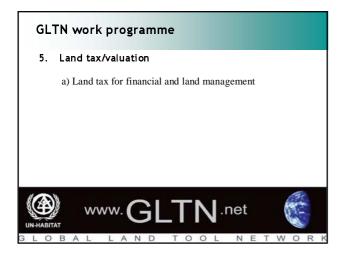

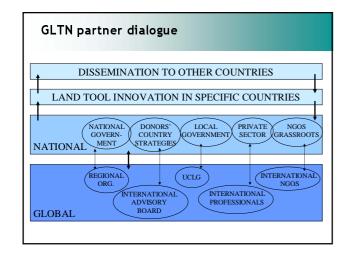

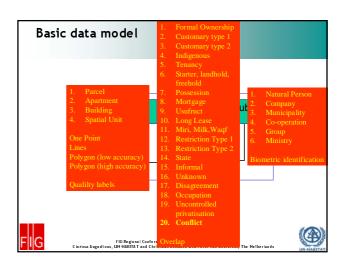

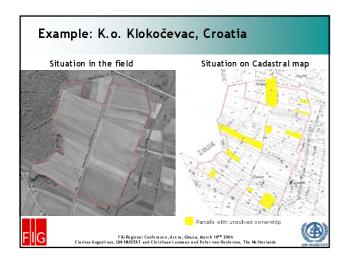

■ Core Cadastral Domain Model ■ Re-usability ■ Conclusions **IG Regional Conference, Accor, Ghene, Merch 10* 2006 Cladsse Augustions, UN-HABITAT and Christiann Lemmes and Pater von Oosternm, The Ne theriands

Social Tenure Domain Model

Cadastral Data

- •object (parcel, apartment, spatial unit)
- "right (ownership (..,..,..),
 usufruct, mortgage, restriction,
 informal, unknown, conflict...)
- **person (natural, non natural, group, group of groups), person can be represented

 **identifiers
- •value
- Area (GIS area and legal area)
- classification
- geographic name
- person name
 date (birth, establishment, acceptance, transaction, survey, check-in)
- Point (x1, y1, x2, y2) boundary
- •face, edge, node: topology
- •GIS Layers
- apartment 3d
- •land use
- •share transaction type

source document •forms

- *purchase price *history (check-in, check-out, mother-child, history class)
- ■right relation
- •mortgage, interest

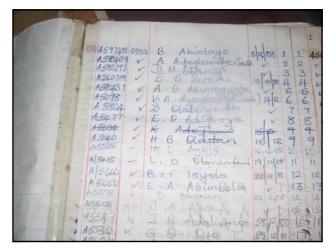

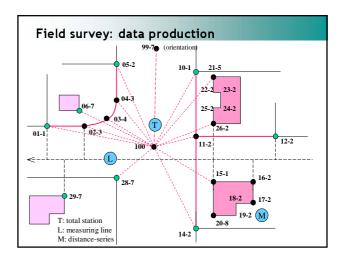

Cadastral Update Process Data •Topological errors •Production norm Transactions Customers request (application) •Quality (accuracy, reliability, collection mode) •Name of Conveyor, Surveyor, etc Time registrationObjection, complaint Salary scale Team Team members Signature (digital) Process step Archive data in use Responsible manager •Next open identifier •Type of instrument Out of tolerance Line code Distance in km Letters to buyer and seller ■Point code •Car in use, fuel •Date and time •Transformation parameters ·Historical data used Cluster identifier IT Support •Site Buyer/seller do not agree Authorisation •Computer availability FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-1488ITAT and Christiaan Lemmen and Peter van Oosterom, The Nethe

Proposal (FIG Washington 2002)

- Develop standard Core Cadastral Domain Model, including:
 - Spatial part (geometry, topology)
 - Extensible frame for legal/admin part
 - Based on core object-right-subject model
- Object-orientation → express in UML
- Accepted by large community: FIG, OGC, ISO, user support, this means it can be adapted by the industry
- Maximize co-operation, minimize double __effort

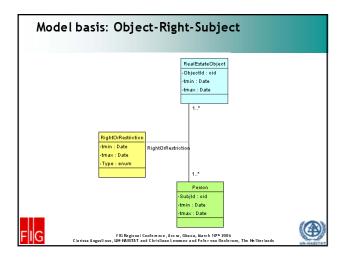

FIG Regional Conference , Accra , Ghana, March 10th 200 6 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlan

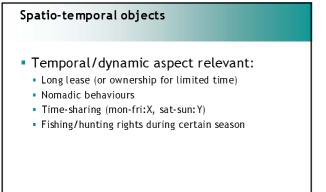

Core Cadastral Domain Model: Legal-administrative

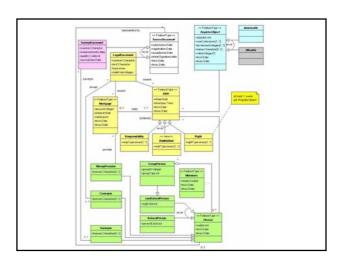

- RRR is an association class between Person and RealEstateObject
- Mortgage, restriction and RRR are based on legal documents or decisions
- Person are specialised as natural or non natural
- Group of Groups of persons
- Surveyor, conveyor and money provider are included, specialisations of the Persons class
- A RRR can be temporal

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter von Oosterom, The Netherland:

Core Cadastral Domain Model: Geometry

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN:HABITAT and Christiaan Lemmen and Peter van Oosterom, The Ne

- Real estate object with specialisations, e.g. parcel, parcel-complex, volume property, restriction area, point parcel, apartment unit, based on topological structure or not
- Agregations like parcels set, parcel complex, apartment complex
- Link to surveying and survey documentation
- Link to OGC standards (Nodes, Edges and Faces)

FIG Regional Conference , Accra , Ghana , March 10^{ch} 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

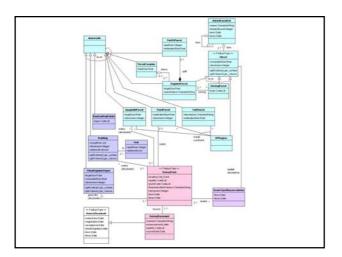

Parcels...

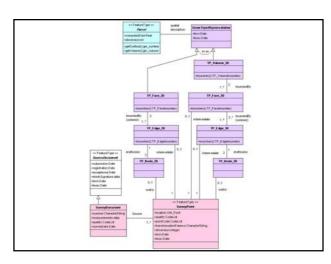

- Not always available in the format of a planar partition
- Sometimes just one references point available or 'unconnected' polygon (or spaghetti) → these solutions may be sufficient (and cost effective)

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Sarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Process: Data Acquisition

- Different accuracy in different area's
- It should be more easy to combine different data acquisition methods with available data sources
- Lidar, Ikonos, Quickbird, GPS, Galileo, Cyclomedia, Tape measurements, Total stations, Ortho Photo's, Aerial Photographs
- Source documents
- WGS/UTM
- Monumentation

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN: HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Input of users (CA)

- EGM, UN ECA, Addis Ababa, Ethiopia,
 November 1998 on Integrated Geo-Information
- EGM, UN-HABITAT, Nairobi, Kenya, November 2004 on Secure Land Tenure: FIG, 2005
- EGM, UN, Bangkok, Thailand, December 2005 on Secure Land Tenure: FIG, 2006
- Research by team, + developing countries students

FIG Regional Conference, Accre, Ghane, March 10⁶h 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherland

Can formal and informal tenure systems be merged in one environment?

- Laws and regulations introduced by a colonial administration to serve the interests of the colonial power
- Separate cadastres have often developed, operating as informal systems in parallel
- System should include information that covers the whole spectrum of formal, informal and customary
- Customary and statutory rights (e.g. Ghana)

FIG Regional Conference , Accra , Ghana , March 10° 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

Can reversibility from database to a paper based system be guaranteed?

- Computer based technology is faced with human resource constraints
- Same is valid for modern survey technology
- Another restriction is related to costs
- Emergency to reconstruction
- Role of paperbased systems

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Sarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Could spatial information in a STDM be represented in both existing geodetic networks and in new spatial frameworks?

- Spatially referenced framework should be developed which can be understood and used by a wider range of stakeholders and decision makers
- A range of techniques and technologies, GPS (centimeter, sub-meter, uncorrected -hand held), conventional terrestrial approaches - measuring tape, plane table to theodolite), remotely sensed images (satellite and photographic)
- Accommodate graphical (pictorial) data, geometric (measurement based) data and topological (connectivity not absolute position)
 data

Is it possible to link a STDM containing spatial data to other systems containing spatial data?

- In a phased design, linking mechanisms should be possible to set up so that a Social Tenure Domain Model can be coordinated with other systems
- Linking systems to other systems has proved to be very problematic in practice
- Can we integrate non cadastral spatial information into this common reference system?
- Will it always be seperate?

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter von Oosterom, The Netherlands

What are the conditions for implementation of a STDM in a distributed and de-centralized environment?

- Vertical coordination
- Limit fragmentation of information
- Economies of scale
- Facilitate local land management and information currency
- Local level:many people know the parcel and its owner/occupant
- Information provision by people with fewer skills using lower grade and cheaper technology
- It should not be necessary for the capital city to hold all the cadastral and land registration records
- Lengthy technical processes will be short circuited
- (Step by step) centralization/concentration

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

How can a STDM be applicable in an environment with different source data with different accuracies?

- High standards of accuracy linked to legal accountability issues often make cadastral systems cumbersome and inflexible
- Varying accuracies should be accepted
- Global Navigation Satellite Systems
- Will GPS surveys allow the community to participate

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Claissa Augustinus - UN-HABITAT and Christiana Lemman and Pater you Costerom - The Netherland

What are the requirements for the user interface at local level?

- For land registration and/or land records to work in Africa the system itself should become more accessible, both in terms of location, cost and user friendliness
- The land office should be at the local level and be user-friendly to poor, often uneducated people

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

How should a participatory approach be optimally supported?

- Participatory land use decision making, so that land rights and land use rights are adjudicated and negotiated at the same time
- This should facilitate information flows
- Information collected and made available at the local level should be passed on to the national level and vice versa, in an appropriate way
- There should be female and local participation

FIG Regional Conference, Accra, Ghana, March 10^{sh} 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherland:

How could a STDM support full and equal access to land?

- A land administration or land management system should ensure that men and women have full and equal access to the economic resources of the country
- Security of tenure is a condition for all and sustainable human settlements development in an urbanizing world

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

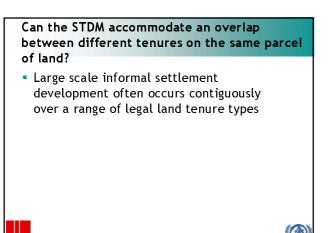

Which types of parcel/spatial unit identifiers should be supported?

- Data bases should accommodate a range of identifiers, geo-referenced parcels, un-referenced parcels, lines and points
- A range of identifiers should be used, not just accurately surveyed parcels
- (Pictorial) reference framework
- Points, geo-codes (sometimes known as dots on plots), lines and polygons
- Polygons with fuzzy boundaries
- Text, including lists of names and unique numbers
- Parcels -poorly surveyed, non geo-referenced and geo-referenced
- Sketch maps and photographs, in the absence of any better identifier
- Approximate boundaries of the informal settlement and the customary areas
- Geo-code or point identifier

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter von Oosterom, The Netherland:

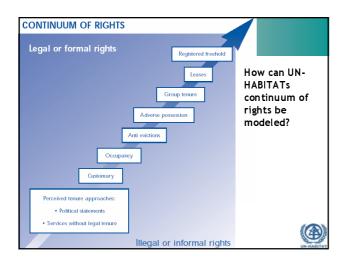

How can optimal flexibility in linking all types of attributes and identifiers be supported?

- Decision makers have to deal with conflicting uses when making decisions
- Decision makers also need the information in a combined form
- Finally, decision makers require information over time
- A unique identifier (the Land Parcel Key) is associated with all information relating to the parcel or spatial unit thus enabling the Deeds, Survey, Financial, Planning and Engineering systems to communicate with each other.

FIG Regional Conference , Accra , Ghana , March 10^{ch} 200 6 Clarissa Auguslinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

What spatial information and land record requirements in conflict situations?

- Sustainable Relief and Reconstruction
- Guidelines on housing, land and property in post crisis situations
- Soft systems thinking
- Characteristics
 - lack of land policy at the national level
- land management and land administration system that is largely dysfunctional
- breakdown in the land management/administration
- land planning system that has not been updated
- breakdown in law and order
- invasion of land
- overlapping rights and claims

FIG Regional Conference , Accra , Ghana , March 19th 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherland

Comments to the questions (CL)

- It seems that the whole spectrum of formal, informal and customary can be covered by re-using functionality
- There could be some (temporal) topological problems

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Clarissa Augustinus, UN:HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherland:

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HBRITAT and Christiana Lemman and Peter you Onstaron. The Netherlands

Can reversibility from database to a paper based system be guaranteed?

- Complete paper based systems are not cheap
- Reconstruction of data in the case of disasters
- Source documents are relevant
- A class: 'SocioTenureRelationship' combined with '(Group)Person' and 'ImmovableObject'
- Appropriate ICT investments and capacity building are necessary conditions for sustainable development, alignment and implementation of the institutional, organizational and technical tools of land management
- The CCDM is designed for a digital environment, reversibility to paper environment seems complex and expensive but must be analyzed
- The need for both a paper based and computerized version
 of a Social Tenure Domain Model has to be further

Could spatial information in a STDM be represented in both existing geodetic networks and in new spatial frameworks?

- Standardization of the spatial reference frame work is a Domain in itself
- AFREF
- Existing co-ordinates in existing frameworks are expected to be transformed to new 'versions' of these co-ordinates in the future
- In case any spatial reference is missing those documents can only be accessed using the object identifier

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter von Oosterom, The Netherlands

Is it possible to link a STDM containing spatial data to other systems containing spatial data?

- Linking mechanisms are possible using unique object identifiers or by geo-referencing
- The implementation of linking mecahnisms requires standardisation and agreements between institutions on the use of those standards
- 'New wave' in geo-information standardization: after the domain independent basic geo-information standards (current series of ISO and OGC standards), the new standards based on specific domains will now be developed

FIG Regional Conference , Accra , Ghana , March 10th 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

What are the conditions for implementation of a STDM in a distributed and de-centralized environment?

- The Social Tenure Domain Model will most likely be implemented as a distributed set of (geo-) information systems, each supporting the data acquisition and data maintenance activities and the information supply of parts of the dataset represented in this model (diagram), thereby using other parts of the model
- Different organizations can have their own responsibilities in data maintenance and supply and communicate on the basis of standardized processes in so called value adding production chains, including upgrading of accuracy where required and the 'level' of the people-land relationship
- (Step by step) centralization/concentration

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Clarissa Augustinus, UN:HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

How can a STDM be applicable in an environment with different source data with different accuracies?

- Accuracy attributes, data collection modes (photogrammetry, satellite images, method of field survey (measuring tape, total station, plane table, etc)), source codes (data producer), date of survey (including name of surveyor or observer), date of creation, etc to polygons, lines and/or points
- The accuracy discussion is not only relevant for geometry

FIG Regional Conference , Accra , Ghana , March 10™ 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

What are the requirements for the user interface at local level?

- The user friendly-ness requirement is probably not explicit within the scope of a Social Tenure Domain Model
- A standardized system contributes in itself to user friendly-ness and the avoidance of bureaucracy via a transparent approach
- Point of attention in standardization is in the number of attributes to be collected.

FIG Regional Conference, Accra, Ghana, March 10°h 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

How should a participatory approach be optimally supported?

 It has to be investigated as to whether the inclusion of a class 'local committee' (with decision making power) and a class 'regional committee' is sufficient to support the participatory approach

FIG Regional Conference , Accra , Ghana , March 10th 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

How could a Social Tenure Domain Model support in full and equal access to land?

Shared rights (relationships) are supported

FIG Regional Conference, Accre, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter von Oosterom, The Netherlands

Which types of parcel/spatial unit identifiers should be supported?

- A range of immovable objects is already supported. This
 concerns topological well structured area's with planar
 topology. Non planar partitions are supported with fuzzy
 boundaries, text labels, overlapping polygons.
- A person can be member of a group, a group can be member of a group of groups. A person (natural, non natural), a group of persons or a group of groups can have a one or more rights or socio-tenure-relationships associated, where each right concerns one or more polygons; polygons can overlap or can be identified with a label. A right or socio-tenure relationship is always in between persons and land. A right can be undocumented, in that case the source document is 'no document'

FIG Regional Conference , Accra , Ghana , March 10th 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

Can the STDM accommodate an overlap between different tenures on the same parcel of land?

This has to be further investigated, it could be of a complex nature from the perspective of re-using functionality of the CCDM if topology comes in. Further it has to be investigated if overlap in non-planarregions are possible

FIG Regional Conference, Accra, Ghana, March 10th 200 6
Chrissa Augustinus, UN-HARITAT and Christiana Lemmen and Pater yan Oosterom. The Netherlands

How can optimal flexibility in linking all types of attributes and identifiers be supported?

- A Social Tenure Domain Model should support the use of all kind of data types (dates, co-ordinates, photographs, digital fingerprints, a matrix of attributes
- Geo-coding approaches have to be further investigated in practice; re-constructability in case of use of co-ordinates for this purpose is a point of attention here
- Unit identifiers can be hierachical or other
- Geo-coding approaches have to be further investigated in practice; re-constructability is essential

FIG Regional Conference , Accra , Ghana , March 10^{ch} 2006 Clarissa Augustinus , UN-HABITAT and Christiaan Lemmen and Peter van Oosterom , The Netherlands

How can UN-HABTAT's 'Continuum of rights' be modelled?

- Rights related to families or groups may be difficult to maintain if all individual persons have to be registered; from CCDM perspective this is not an issue
- The Social Tenure Domain Model has to provide functionality that supports inclusion of the Continuum of Rights
- This is a main research challenge; land tax and land use may require further attention is this research

FIG Regional Conference, Accra, Ghana, March 10th 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

What are the spatial information and land record requirements in conflict situations?

- What is needed is an information system that shows all the claimants and rights holders
- Different types of claims and rights, accuracy and legal evidence
- Overlapping rights

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Conclusion

- A first analyses of functionality for a Social Tenure Domain Model is presented in this paper.
- It can be expected that substantial part of the FIG Core Cadastral Domain Model can be re-used or specialized into a Socio Tenure Domain Model
- CCDM functionality is re-usable but has to be further reviewed and assessed by experts in Social Tenure

FIG Regional Conference, Accra, Ghana, March 10^{sh} 200 6 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherland

User requirements

- Better performance
- Security of tenure
- Reduce land disputes
- Formalise informal area's
- E-governance

FIG Regional Conference, Accra, Ghana, March 10th 2006 Clarissa Augustinus, UN-HABITAT and Christiaan Lemmen and Peter van Oosterom, The Netherlands

Way forward

- FIG partner of GLTN
- A partnership between FIG and UN HABITAT within the frame work of the Global Network of Pro-Poor Land Developers could be the basis for a further analyses and development of the Social Tenure Domain Model. This Network is being facilitated by UN-HABITAT together with partners such as FIG, the World Bank, ITC, the Lincoln Institute, Swedish and Norwegian aid, to be able to identify and solve some of the key blockages to the delivery of security of tenure for the poor. An appropriate pro poor Social Land Tenure Domain Model is considered one of the priority tools. 7
