

Communicating Science and Stakeholders in the Environment - the Surveyors Role of the Future

Tim ELLIOTT, United Kingdom

Key words: Land management; professional practice; real estate development; spatial planning; environment, stakeholders, future

SUMMARY

Communicating science and stakeholders - the Surveyors role of the future. Excitingly, the traditional technical role of the Surveyor will evolve into a one, of communicating between science and technology on the one hand, and stakeholders on the other. This will occur, in an era when consultation and communication form an increasingly vital part of surveying in the environment, across the world. By their training and experience, Surveyors are uniquely equipped in this developing role. Current and recent case studies will be presented where surveyors form the crucial link between environmental science and stakeholders, within major environmental projects.
